

First name: Bibi

Please describe in your own words any changes you have noticed from the treatment Dr. Cha has provided.

Before I began the procedure with the C20 I felt a lot of stress in my jaw and neck. There was a grinding sound or a clicking sound in my jaw joint on the right side. My front lower teeth met the upper teeth and I could see some wear on the lower teeth.

After using the C20 apparatus my jaw is no longer painful, the grinding / clicking sound is gone. It seems my lower jaw has moved back because my lower front teeth ~~is~~ no longer hit the upper front teeth. There's an overall more relaxed feeling in my jaw.
